## Attention Customers with the following chassis:

- *Magma PCI-13R*
- *Digidesign 13-Slot Pro Tools Expansion Chassis with serial numbers NB0600100C or higher*

Chapter 5 of the Expanded Systems Guide for Pro Tools v5.0.1 contains a misprint. The picture for these chassis at the bottom of page 22 should look like this:

These chassis have slots that are numbered sequentially, right-to-left from the front, in two banks (4-9 and 4-10). Install the controller card in the controller card slot of the expansion chassis (the slot closest to the power supply). This controller card resembles a PCI card.

Here is an example card order for a Pro Tools 24 MIX/MIXplus System.

Power Macintosh Blue & White G3 or G4
Chassis cards with multiple audio interfaces:

SLOT	CARD
Exp. Slot	Chassis Controller Card
Slot 4	MIX Core (Interface #1 and #2)
Slot 5	MIX Farm (Interface #3 and #4)
Slot 6	d24 (Interface #5 and #6)
Slot 7	MIX I/O (Interface #7 and #8)
Slot 8	DSP Farm (Interface #9)
Slot 9	DSP Farm or SampleCell card
Slot 4	DSP Farm or SampleCell card
Slot 5	DSP Farm or SampleCell card
Slot 6	DSP Farm or SampleCell card
Slot 7	DSP Farm or SampleCell card
Slot 8	Available for non-bus master card
Slot 9	Available for non-bus master card
Slot 10	Available for non-bus master card

Beige G3 and 9500/9600 are not supported with these chassis.

AVoption and AVoption|XL users, please see the updated AVoption release bulletin or guide for the qualified card order with these chassis.
