

DAE 5.3 R2 Update for Pro Tools|HD on Macintosh

- Addresses Errors with Plug-In Inserts Menu Operation

What's Fixed in DAE 5.3 R2?

- Some Plug-Ins Are Incorrectly Listed Twice or Missing from the Plug-In Inserts Menu

With Pro Tools TDM 5.3, one or more plug-ins may appear to be missing from the Plug-In Inserts menu, while other plug-ins may be listed twice. Additionally, selecting one of the duplicate plug-in names from the menu may actually instantiate one of the “missing” plug-ins. DAE 5.3 R2 corrects this problem.

Who Should Use this Update?

This update should be used only by Pro Tools|HD system owners using Pro Tools TDM 5.3 and the first revision of DAE 5.3, which shipped with Pro Tools|HD systems in the first quarter of 2002. Beginning in April 2002, the Pro Tools 5.3 Installer CD-ROM automatically installs DAE 5.3 R2. Pro Tools|HD customers who received DAE 5.3 R2 do not need to use this update.

Updating DAE

To use this fix, you'll need to replace your existing version of DAE.

To replace DAE:

- 1 Drag the new DAE into the DAE folder within your System Folder.
- 2 Click OK to replace the older version.

 *Going forward, newer “customer support” versions of Pro Tools 5.3 components may be made available to provide additional bug fixes. When available, these versions will be located on the Download page in the Support section of Digidesign’s Web site (located at www.digidesign.com).*
