SampleCell Editor 3.0 CS1

This update to the SampleCell Editor is meant for all users of SampleCell II PCI and SampleCell II Plus cards on the Macintosh. It replaces the older version 2.1.1 and adds a few new features such as support for 24-bit files and the split-stereo file format.

Please read the enclosed SampleCell Editor 3.0 Addendum for more information about system requirements, installation and changes to the software.

Before installing the update please make sure to remove the following files:

- System Folder/Preferences/SampleCell Preferences
- System Folder/Preferences/SampleCell II MIF

We wish you many more productive years with SampleCell II and hope you enjoy the new features!

The SampleCell II Team
